Sul

58. (Twice Amended) A method for providing antimicrobial activity on skin, the method comprising the step of:

administering to skin a composition comprising a biguanide polymer and a carrier selected from the group consisting of a cream, a lotion, a powder, a deodorant, a spray, a gel, a wax, an oil, an ointment, a soap, and an alcohol.

- 60. (Amended) The method of claim 58, wherein the biguanide polymer comprises poly(hexamethylenebiguanide), poly(hexamethylenebiguanide) hydrochloride, poly(hexamethylenebiguanide) gluconate, poly(hexamethylenebiguanide) stearate, or a derivative thereof.
- 61. (Amended) The method of claim 58, wherein the composition further comprises a metallic material.
- 62. (Amended) The method of claim 61, wherein the metallic material is silver or a silver compound.
- 63. (Amended) The method of claim 62, wherein the metallic material is silver nitrate.
- 64. (Amended) The method of claim 63, wherein the metallic material is silver iodide.
- 65. (Amended) The method of claim 58, wherein the biguanide polymer is present as an adduct with a substantially water-insoluble organic compound.
- 68. (Amended) The method of claim 58, wherein the biguanide polymer comprises a chemical group capable of forming a covalent bond.

Please add the following new claims:

89. A method for providing antimicrobial activity on skin, the method comprising the step of: administering to skin a composition comprising (i) an organic polycationic polymer; (ii) a metallic material, and (iii) a carrier selected from the group consisting of a cream, a lotion, a powder, a deodorant, a spray, a gel, a wax, an oil, an ointment, a soap, and an alcohol.

7 / 9

A method for providing antimicrobial activity on skin, the method comprising the step of: administering to skin a composition comprising, in a dermal antiseptic formulation, a biguanide polymer,

wherein the dermal antiseptic formulation is selected from the group consisting of surgical scrubs, pre-operative skin preparations, healthcare personnel handwashes, antiseptic handwashes, antimicrobial soaps, antimicrobial creams, antimicrobial hand sanitizers, antimicrobial deodorants, antimicrobial lotions, and antimicrobial gels.

- 91. The method of claim 90, wherein the biguanide polymer is present as an adduct with a substantially water-insoluble organic compound.
- 92. A method for providing antimicrobial activity on skin, the method comprising the step of: administering to skin a composition comprising, in a dermal antiseptic formulation, an organic polycationic polymer and a metallic material,

wherein the dermal antiseptic formulation is selected from the group consisting of surgical scrubs, pre-operative skin preparations, healthcare personnel handwashes, antiseptic handwashes, antimicrobial soaps, antimicrobial creams, antimicrobial hand sanitizers, antimicrobial deodorants, antimicrobial lotions, and antimicrobial gels.

93. A method for providing antimicrobial activity on skin, the method comprising the step of:

Amendment and Response U.S. Serial No. 09/392,842 Page 4 of 6

By

administering to skin a composition comprising a biguanide polymer and a skincompatible component selected from the group consisting of emollients, thickeners, humectants, skin moisturizing agents, and surfactants.

- 94. The method of claim 93, wherein the biguanide polymer is present as an adduct with a substantially water-insoluble organic compound.
- 95. A method for providing antimicrobial activity on skin, the method comprising the step of:

administering to skin a composition comprising (i) an organic polycationic polymer; (ii) a metallic material; and (iii) a skin-compatible component selected from the group consisting of emollients, thickeners, humectants, skin moisturizing agents, and surfactants.

- A method for providing antimicrobial activity on skin, the method comprising the step of: administering to skin, by spreading or immersion, a composition comprising a biguanide polymer.
- 97. The method of claim 96, wherein the biguanide polymer is present as an adduct with a substantially water-insoluble organic compound.

98. A method for providing antimicrobial activity on skin, the method comprising the step of: administering to skip, by spreading or immersion, a composition comprising an organic polycationic polymer and a metallic material.
